GOOTY RSP WAGON ROH TENDER

Expanded key points and important statements • 6-page guide

KEY POINTS • IMPORTANT STATEMENTS • QUICK REVISION GUIDE

This expanded summary is organized into six pages for easier review. It highlights the main tender particulars, eligibility and bid submission, work scope, responsibilities, safety/compliance and key risks. It is not a substitute for the full tender document or corrigenda.

PAGE 1 — Tender Overview and Main Particulars

This tender is issued by South Central Railway, Guntakal Division, Mechanical C&W; Department for ROH attention of 2,000 wagons under RSP at Freight Depot, Gooty (GY).

Main particulars

- Name of work: **ROH attention of 2,000 wagons under RSP at Freight Depot, Gooty (GY)**.
- Contract period: **18 months**.
- Estimated cost shown in the tender: ■**5,64,93,408.12**; EMD: ■**4,32,500**.
- The tender is an open e-tender using a **two-packet system**: technical bid and financial bid.
- The document is hosted/submitted through the GeM portal, as stated in the NIT.
- Commencement is within the period specified in the tender after LOA/contract order, with the extracted special condition stating commencement within **15 days** unless otherwise directed.

Critical evaluation threshold

- The technical bid must score at least **60 marks out of 100**. A bidder below 60 does not qualify even if other technical/financial eligibility conditions are met.
- The lowest financial bidder is determined only from the qualified bids, subject to the tender's rules.
- False or forged credentials can lead to rejection and legal/punitive action; if a contract has already been awarded, termination and other contract consequences may follow.

PAGE 2 — Experience and Eligibility

The tender defines the kinds of railway rolling-stock repair experience that may qualify. Evidence must be submitted in the prescribed format.

Relevant experience described in the tender

- Railway wagon manufacture, rebuilding, renewal or rehabilitation.
- ROH work and specified NPOH/C-category repairs involving replacement of side walls, end walls or floors.
- Body or bogie repairs to coaches or wagons.
- Welding repairs in freight examination yards, as covered by the tender’s experience definition.
- Experience certificates must clearly show the work scope/nature, actual completion cost and completion date.
- Experience certificates from private individuals are not accepted; the tender sets out the eligible issuing entities and supporting proof.

How work value is assessed

- The tender considers qualifying similar work completed or ongoing during the qualifying period, subject to its detailed rules.
- If the final bill has not been passed and final measurements have not been recorded, the paid amount including statutory deductions may be considered.
- Where positive variation has not been sanctioned, the original agreement value or last sanctioned agreement value, whichever is lower, may be used for eligibility.
- For composite work, separately completed components of the required nature/value may be considered under the stated conditions.
- Materials issued free of cost by the employer are excluded from the qualifying completed-work value under the tender’s clause.

PAGE 3 — Financial Standing and Mandatory Documents

Financial eligibility is assessed from supporting evidence, not simply from a bidder's own statement. The tender warns that missing certificates may lead to summary rejection.

Financial capability

- The document sets financial-turnover/contractual-receipt requirements and requires the stated financial certificates for the specified financial years.
- Audited balance sheets certified by a Chartered Accountant are required for completed financial years.
- For the latest year where audit is not yet due and the current financial year, the tender permits provisional balance-sheet evidence supported by Income Tax Form 26AS, as specified.
- The tender's liquidity clause requires access to liquid assets, lines of credit or other financial means; the banking reference must be from a scheduled bank in India and no more than **3 months old** on the bid-submission date.
- Read the exact financial thresholds and Annexure formats in the eligibility chapter before preparing the bid.

Important forms and certificates

- Submit the required experience and turnover certificates, financial-standing evidence and prescribed undertakings.
- Include the declaration for truthfulness/correctness of documents; the tender says failure to submit it leads to summary rejection.
- Include the prescribed declarations about blacklisting/debarment/termination, disclosure under RTI, retired Railway employee relationships and staff deployment/safety, as applicable.
- Include valid ISO and GST registration certificates as required by the tender.
- Submit the technical score/Annexure-S information and all other checklist items identified in the tender.

PAGE 4 — Technical Scoring and Bid Preparation

The Gooty tender does not rely only on pass/fail eligibility. A technical score is assigned, and the minimum qualifying score is mandatory.

Technical evaluation

- The required technical score is **60/100 or higher**.
- Use the exact Annexure-S scoring criteria and supporting documents; do not assume that satisfying one eligibility criterion guarantees qualification.
- Ensure all evidence for experience, financial turnover and financial standing is attached with the offer. The tender says missing evidence may result in summary rejection even for contractors already working with the Railway.
- Documents may be verified for authenticity, including those submitted by the lowest bidder.
- If a submitted document is found false or forged, the tender provides for rejection, possible legal action and termination consequences if already awarded.

Packet discipline

- Keep technical credentials, declarations and required supporting documents in the technical packet.
- Put price/rate information in the financial packet only, following the prescribed schedule and GeM instructions.
- Do not modify tender conditions or submit an offer with unauthorized conditions.
- Confirm that all signatures, stamps, dates and annexure fields are complete and that uploaded scans are legible.
- Check GeM for addenda/corrigenda and the exact submission deadline before uploading.

PAGE 5 — Work Execution and Contractor Responsibilities

The contractor is responsible for delivering the specified ROH work to Railway instructions and for providing the labour, tools and materials allocated to the contractor.

Operational requirements

- Perform wagon ROH/repair activities in accordance with the applicable wagon maintenance manual, tender scope and directions of the nominated Railway supervisor.
- Deploy supervisors, welders, fitters, helpers and other required staff according to the schedule and ground requirement communicated by Railway staff.
- Staff may be required on Sundays and holidays without extra payment from the Railway; the contractor must manage staff leave and rest.
- If work is interrupted by labour unrest or other reasons, the contractor must make alternative arrangements so that ROH activity continues without dislocation.
- Provide the contractor’s own tools and plant, machines, consumables, ladders, PPE and transport at the contractor’s cost, except for utilities expressly provided by Railway.
- Use recommended cleaning solutions for toilets/interior coach portions where that part of the scope applies, and use approved-standard consumables.

Coordination and protection

- Follow instructions and working schedules issued by the nominated Railway supervisor or authorized officer.
- Carry out work without disrupting Railway operations or infringing safe working practices.
- Protect Railway equipment and property from damage and prevent loss/theft of contractor materials.
- The tender includes provisions concerning Railway inspection/certification of consumables and handover of tools and plant at contract end; follow the detailed clauses.

PAGE 6 — Safety, Statutory Compliance and Final Checklist

Safety, legal compliance and reliable documentation are continuing contractor obligations, not just bid-stage formalities.

Safety and labour obligations

- Provide safe working practices and appropriate PPE; counsel staff periodically on safe work inside Railway premises.
- The contractor is responsible for the safety of its labour and for accident/injury responsibilities allocated by the tender.
- Comply with applicable labour laws, minimum wages, working-hour regulations and statutory recordkeeping.
- Do not employ child labour. The tender states that labour-law violations may lead to termination.
- Maintain valid GST registration and PAN, and provide GST documentation/proof with bills as required.
- Taxes and duties assigned to the contractor under the contract are the contractor’s responsibility.

Pre-submission checklist

- Verify estimated value, EMD, contract period, bid validity and current GeM dates from the original document/portal.
- Confirm experience matches the tender’s definition of similar work and that certificates come from eligible issuing entities.
- Check financial eligibility, audited/provisional accounts, Form 26AS, banking reference and all mandatory declarations.
- Check the technical score calculation against Annexure-S and ensure the score reaches at least 60.
- Keep technical and financial bids separate and verify every required annexure before final submission.

During contract

- Maintain workforce, equipment, consumables and alternate staffing as required to avoid disruption.
- Keep safety, quality, labour and GST records ready for Railway inspection.
- Review the complete tender clauses on measurement, payment, deductions, performance guarantee, penalties, termination and dispute resolution; these details should not be inferred from this summary.
